

Academic Integrity Policy

Collaboration on practice sets and ungraded homework is encouraged. Projects, take-home assessments, and any work submitted for a grade must represent the student's own reasoning and setup, not just a final answer copied from a peer.

Use of an AI tool to generate a full solution that is then submitted as the student's own work is treated as a violation, whether or not the tool is disclosed. Using an AI tool to check or explain a concept the student has already attempted is not a violation.

The first indicator of a possible violation is usually identical wording or identical error patterns across two or more submissions. A teacher who notices this documents it and forwards the work to the grade-level office rather than assigning a grade unilaterally.

A confirmed first violation results in a zero on the assignment and a mandatory meeting with the student and a guardian. A second confirmed violation in the same school year is escalated to the academic honesty board.

Students may appeal a finding in writing to the academic honesty board within five school days of being notified.
